To Whom it May Concern

We are pleased to write a letter of reference for the services provided by Patsimo Systems in getting high value out of our OSI PI system at Qatar Power. Patsimo's experience in Power Industry helped capture all required details in extensive visualization, analytics and asset framework built for our Power & Water islands.

Services involved –

- Building detailed Pi Process Book display screens of Power and Water islands
- Design and Configuration of Asset framework for Power and Water islands
- Basic thermal Performance Calculations of the Power island
- Calculation of important KPIs of Water island
- Implementation of critical process notifications
- Design the Executive management reports on PI CoreSight displays

Interesting aspect of this project is that all major tasks like Configuration, Calculations, Visualization, and Notifications etc. were executed remotely requiring minimum supervision from Qatar power. We are happy with the continued and committed support extended by Patsimo Systems even after the project completion and we gladly recommend Patsimo Systems to others interested in OSI PI related services.

Kind regards,

Parasram Borkar

Sr Engineer Commercial and Performance
